

S.No: 2	Exp. Name: Write a C program to convert the temperature from Fahrenheit to Celsius	Date:2022-12-31
---------	---	-----------------

Aim:

Write a program to convert the given temperature from fahrenheit(F) to celsius(C).

During execution, the program should print the following message on the console:

Enter F :

For example, if the user gives the following as **input**:

Enter F : 32.45

Then the program should **print** the result as:

C = 0.250000

Note: Use the **printf()** function with a **newline** character (`\n`) at the end.

```
celsius = (5 / 9) * (fahrenheit - 32)
```

Source Code:

Program306.c

```
#include<stdio.h>
int main()
{
    float f,C;
    printf("Enter F : ");
    scanf("%f",&f);
    C = (f-32) * 5/9;
    printf("C = %f\n",C);
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter F : 80.779
C = 27.099443
